SECURITY SYSTEMS DIVISION

Dear Ladies and Gentleman,

we would like to inform of new products, updates to our product range and the latest industry news!

PENTAX introduces: TS12V513ED-Q (HK)

A new **Varifocal lens** with the large focal range **5mm to 60mm** and a **DC drive Auto Iris**. The lens can be used as a universal lens for almost every purpose with its varifocal focal length range.

Typical applications are the monitoring of petrol stations forecourts, for reliable identification of the car model type and more importantly, the number plate. Warehousing surveillance to protect the stock in small or large areas or defined high value areas. Railway station platforms for increased field of view depth, to cater the platform distances.

With the above in mind, as well as many other applications for professional video surveillance the visibility of **subject detail, reliability and durability** are essential.

Every chain is only as good as the links within the chain.

And as the first link in the chain of video surveillance components, the lens carries a particular **high** responsibility to ensure a **sharp, clear, contrast rich** and **colour true image**.

Therefore, PENTAX, a manufacturer for more than 50 years, of high quality lenses for video surveillance, has set the lens design and selection of parts by focusing on the highest optical and mechanical quality.

Even with the lens compact design, the F-Stop is **F1:1,3**. Together with professional CCTV-Cameras and visible light from street lamps for example, a 24hr video surveillance can be realized without expensive (IR-)Illumination.

Of course, like all PENTAX lenses with electric/electronic components, this lens meets in **compliance with the EMC- (CE) and RoHS-Rules (CE)**. This new lens will replace the C70509HK, TS10V518AED (HK).

New Contact for PENTAX Switzerland

For sales enquiries for Switzerland **Mr. Klaus Eichelseder** is your immediate contact partner:

Mr. Klaus Eichelseder

Honors for PAIR II

We are pleased! The PENTAX CCTV-Objektiv H55ZAME-F-PR02 "PAIR 02" was nominated as **Best in Public Safety Solutions** at the ISC-West 2011 ISC. That has become PENTAX CCTV-lenses **3rd consecutive year** for the prestigious **NPS-Award** at the ISC West show.

PAIR 02 is the 2nd generation in the PAIR-Systems (PENTAX Atmospheric Interference Reduction). The PAIR-Technology was first introduced in order to reduce the air interferences within the focal length, such as fog and smoke, snow etc., in the Video image.

With the PAIR 02 an image stabilizers supplements the reduction of heat haze and it is through these high-performance functions PAIR 02 is suited best for the effective supervision of large areas such as border control, coastline security, harbours, airport, and other large focal length demanding areas.

If you have any questions don't hesitate to contact us.

Best regards,

Thomas Feichtner
