SECURITY SYSTEMS DIVISION

PENTAX Info Service to our Customers

Dear valued customer,

With this newsletter, we would like to inform you about new products, updates to our product range and interesting industry news!

1. New: 20x Zoom Lenses with Mega Pixel Resolution

After a short transitional period, all PENTAX 20x zoom lenses have mega pixel resolution, meaning that they can not only be used on standard cameras, but also high-resolution analogue and IP Cameras.

Another highlight of this series is the availability of high-speed and super-high-speed motors. Equipped with the fastest motors, the complete zoom or focus range can be completed within 2 seconds. To maintain optimum lens performance for many years to come, the lens series is equipped with special lubricants, robust motors and gearing.

The transition to megapixel resolution of our 20x zoom range occurred smoothly, because external dimensions and electrical continuity has been maintained together with all optical corner stones, for example, focal length, angle of view and minimum object distance.

2. Test in Benchmark magazine

In January's issue of Benchmark Magazine our new Varifocal plus lenses were subjected to a lens comparison test. We are happy to announce that we have passed this test as the winner!

Should you have questions or require further information about any of our products, please do not hesitate in contacting us at any time!

Yours sincerely,

Thomas Feichtner
Head of Sales & Marketing
